

Make complex operations legible.

A presentation template for clear, credible conversations about AI, data, automation and product systems.

S.T.R.I.N.G

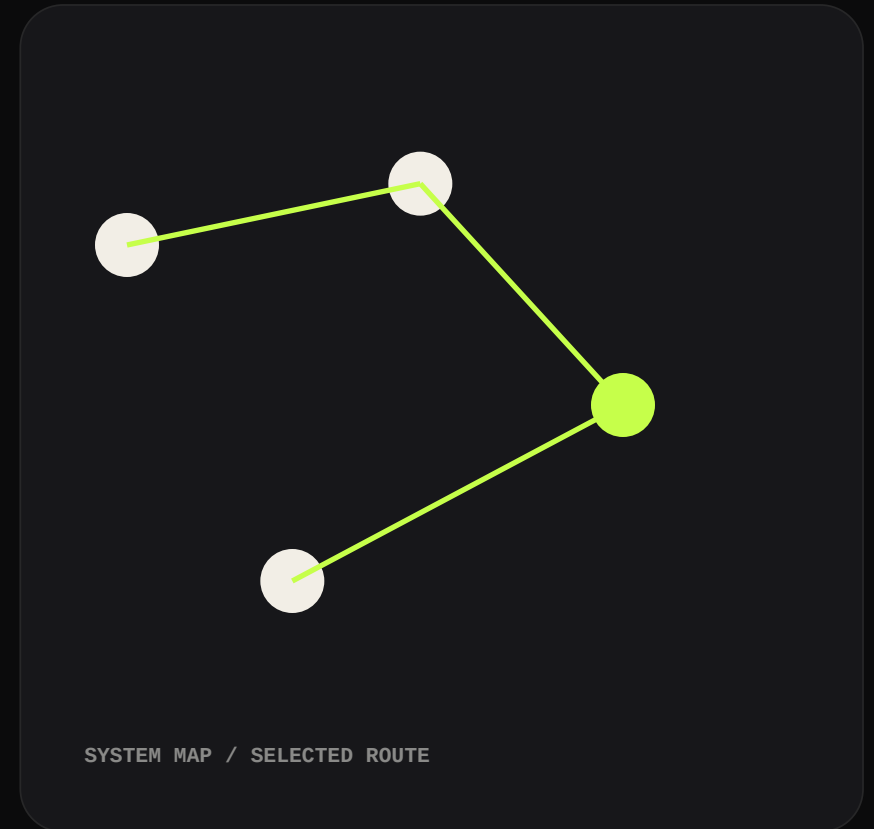

Technology Solutions

The operational problem.

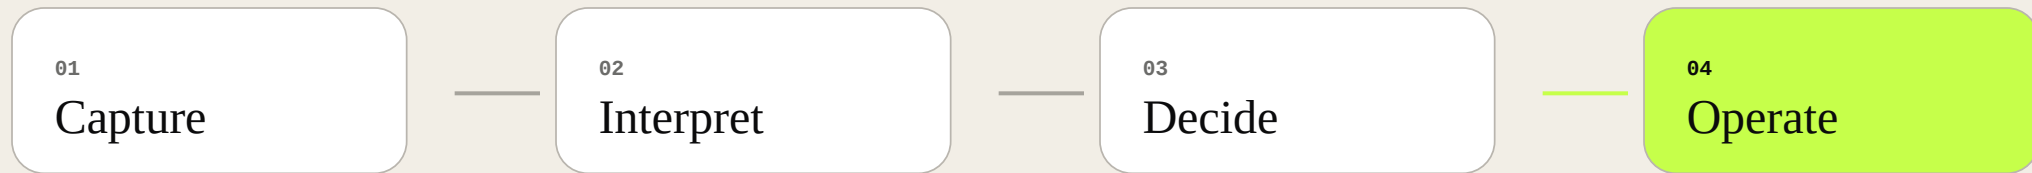

Decisions break when the system is invisible.

The most valuable transformation work makes data, ownership and exception paths visible before it adds another tool.

From signal to action.

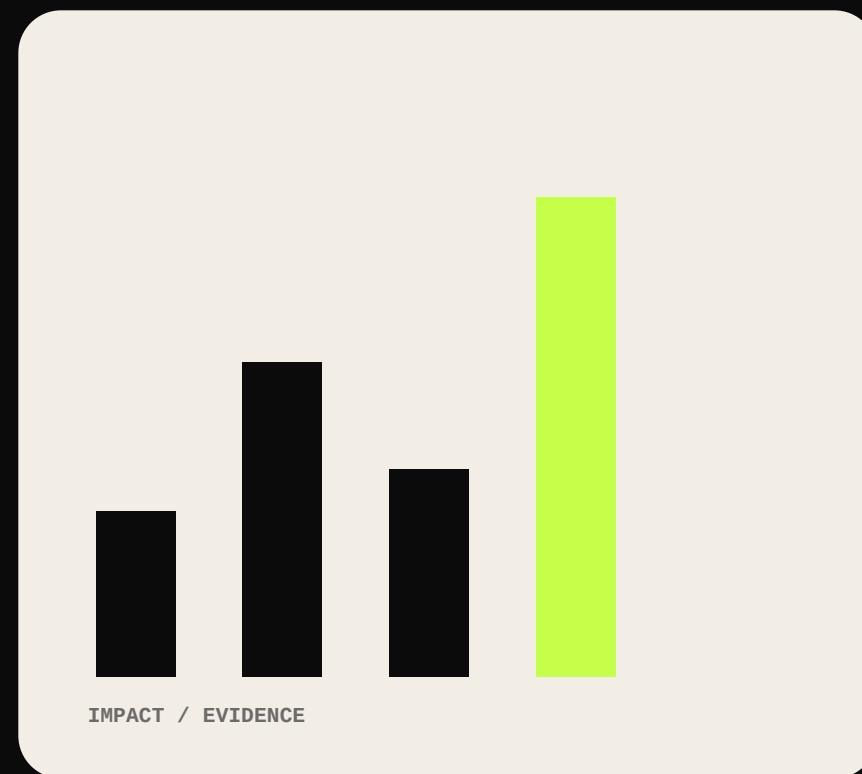

Show three to five real stages. Highlight only the recommended or live state.

-44%

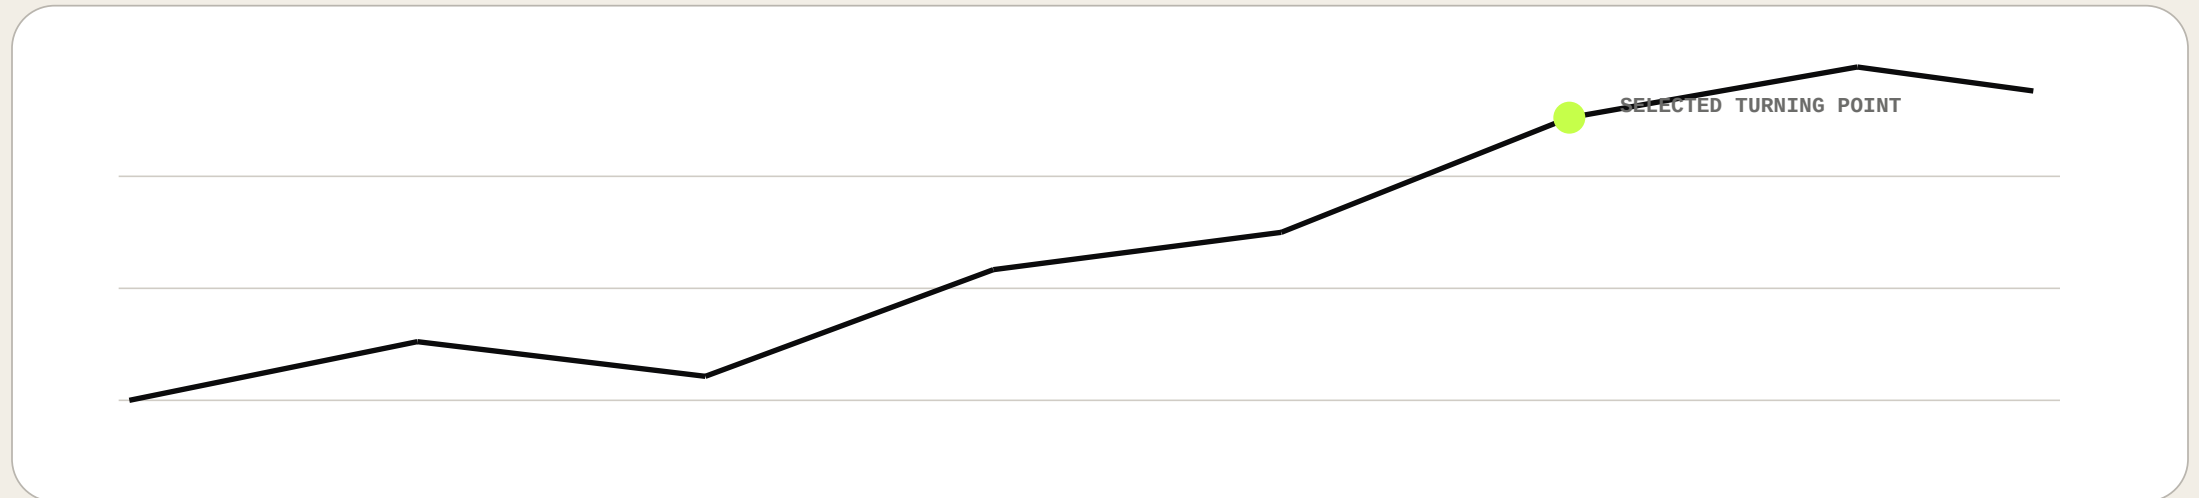

DEAD STOCK

A single measure of impact, paired with the operational change that made it possible.

The insight is the headline.

Use data to support a conclusion, not to make the audience interpret a dashboard.

Build the system you can run.

Start with the constraint. Leave with a working path forward.
